International Conference on Emerging Wireless Communications and Networking

Track2: Communications QoS, Reliability and Performance Evaluation

Main Topics of Interest of this track can be found blow:

- Quality in Multimedia Networks, including Voice over IP and IPTV
- Quality, Scalability and Performance in the Internet
- Quality and Performance in Wireless and Mobile Networks
- Quality, Reliability and Performance in Optical and Multi-Layer Networks
- Quality and Performance in Autonomic Systems
- Quality and Performance in Grid, Cloud and Distributed Computing
- Quality and Performance in Overlay (including Peer-to-Peer) Networks
- Quality and Performance for Network and Services
- Quality and Resource Allocation for Network Services, VPN, Web
- Performance Modeling of Next-Generation Networks
- Performance of Large Scale Experimental Platforms
- Scalability, Robustness and Resilience
- Standardization Aspects of QoS and Reliability
- Network Performance Evaluation Techniques
